

Survey for Indexing Requirements

Please indicate below which of the following procedures you will need to have conducted, the number of plants to be tested¹ and the approximate date(s) you hope to have the test(s) done.

NAME OF FARM: _____

CONTACT PERSON: _____

Procedure	Number of plants to be tested	Approximate date
ELISA – for CTV ²		
Bio-indexing for		
Cachexia viroid		
Concave gum virus (?) ³		
Dweet mottle virus		
Exocortis viroid		
Infectious variegation		
Psorosis		
Tatter leaf		
Citrus tristeza virus		

¹ Indicator seedlings will not be ready to be used for bio-indexing until 9-12 months after sowing. It is expected that seeds will be sown by March 2004 when seeds are sourced.

In addition, once plants are inoculated (initiation of bio-indexing) they will require a minimum of 3-12 months for completion of the test.

² Citrus tristeza virus

³ Classification of the organism causing this disease has not yet been ascertained.
